

# mesa<sup>®</sup>

rugged notepad

**We know there are less expensive tablet and PDA options out there, but we also know you won't regret the endless benefits of purchasing a Juniper Rugged handheld. Why not invest a little more in the Mesa Rugged Notepad<sup>®</sup> now? You'll thank yourself later.**

### You can stay in the field

The Mesa Rugged Notepad fully charges in a quick 2–4 hours and has two battery slots, allowing up to 16 hours of operation. That's nearly double the battery life of the average PDA.

### Losing data is costly

Think about the cost of labor for a day. If you lose your data because your PDA stops working, you lose an entire day's work, plus you have to purchase a new PDA. The Mesa Rugged Notepad is ultra-rugged, meaning you can rest assured your information is safe.

### It's built to survive

With an IP67 sealed rating, the Mesa Rugged Notepad is completely sealed against dust and water. That means it keeps working after you drop it in the river instead of having to stick it in a bowl of rice to dry.

### Expand and customize it

The customizable expansion area on the Mesa Rugged Notepad allows system integrators to add specific proprietary technology directly on to the Mesa, versus having to build an entire new handheld or piece together a scrappy solution.

### Built to withstand extremes

PDA's may break down or fail in extreme temperatures. The Mesa Rugged Notepad is designed, tested, and proven to operate in temperatures as frigid as -22°F (-30°C) or as scorching as 140°F (60°C).

### You may flinch, but you won't cry

The Mesa is one tough heap of equipment, surviving four foot drops onto concrete again and again. So when that inevitable day comes and you drop it, you'll be thankful you didn't purchase consumer-grade equipment.

### Massive screen real estate

Bigger is better, and the Mesa's giant display is no exception. With a 5.7 inch display and an ultra-bright backlight, no other PDA comes close to the Mesa's stellar visibility.

### Customer support

No need to navigate through an automated phone system. When you call us for help, you'll talk to a real person within seconds.
